First Biennial Report

of the

State Tax Commission

Of Utah

For the Years 1931-32

First Biennial Report

of the

State Tax Commission

Of Utah

For the Years 1931-32

Letter of Transmittal

To the Governor and the Legislature of the State of Utah:

We have the honor to transmit herewith the report of the State Tax Commission as required by law.

STATE TAX COMMISSION,

GEORGE A. CRITCHLOW,
Acting Chairman
HOWARD P. LEATHAM
R. E. HAMMOND

Office of the State Tax Commission
State Capitol, Salt Lake City, Utah
December 20, 1932.

TO THE GOVERNOR AND THE MEMBERS OF THE LEGISLATURE:

The State Tax Commission was created by an Act of the Legislature of 1931 pursuant to the Constitutional Amendment adopted at the election of 1930 which provides:

"There shall be a State Tax Commission consisting of four members, not more than two of whom shall belong to the same political party. The members of the Commission shall be appointed by the Governor, by and with the consent of the Senate, for such terms of office as may be provided by law. The State Tax Commission shall administer and supervise the tax laws of the State. It shall assess mines and public utilities and adjust and equalize the valuation and assessment of property among the several counties. It shall have such other powers of original assessment as the Legislature may provide. Under such regulations in such cases and within such limitations as the Legislature may prescribe, it shall establish systems of public accounting, review proposed bond issues, revise the tax levies and budgets of local governmental units, and equalize the assessment and valuation of property within the counties. The duties imposed upon the State Board of Equalization by the Constitution and Laws of this State shall be performed by the State Tax Commission.

"In each county of this State there shall be a County Board of Equalization consisting of the Board of County Commissioners of said county. The County Boards of Equalization shall adjust and equalize the valuation and assessment of the real and personal property within their respective counties, subject to such regulation and control by the State Tax Commission as may be prescribed by law. The State Tax Commission and the County Boards of Equalization shall each have such other powers as may be prescribed by the Legislature."

This amendment in effect substituted the Tax Commission for the State Board of Equalization, all of whose former powers and duties were transferred to the State Tax Commission together with the additional powers

and duties given by the terms of the amendment and by the Laws enacted at the 1931 Session pursuant thereto.

The members of the Commission were appointed April 15, 1931, and immediately organized for business. The membership consisted of the undersigned members and the late Edward H. Snow, as Chairman, whose sudden and untimely death on July 18, 1932, has seriously impaired the efficiency of the Commission by the removal of his wisdom and experience which it will be difficult to supplant.

One of the first questions which was presented to the Commission after its organization was that of the administration of the several State special taxes. The Constitution, as amended, provides specifically that, "the State Tax Commission shall administer and supervise the tax laws of the State." The various special taxes to which we refer, were imposed from time to time by laws enacted prior to the creation of the Tax Commission, and these laws entrusted their administration to various State officials; the gasoline tax to the Secretary of State, the cigarette tax and the oleomargerine tax to the State Treasurer, the inheritance tax to the Attorney General, etc. An effort was made during the 1931 Session of the Legislature to transfer, by law, the administration of these taxes to the State Tax Commission but for one reason or another the necessary bills were never introduced. As a consequence, after the adjournment of the Session, the following situation existed: The Constitution requires the State Tax Commission to administer and supervise the Tax Laws of the State, while the laws enacted by preceding legislatures and unamended and unrepealed require the administration of these taxes by other state officers. Some people professed the belief that the Constitutional provision was mandatory and vested in the Tax Commission the authority to administer these laws. Others were of the opinion that the Constitutional provision was neither mandatory nor self-executory but required legislative enactment to carry the transfer into effect. The third opinion was that under the circumstances there existed no office or authority empowered by law to administer these taxes. This third construction would, of course, if valid, have had disastrous consequences to the revenues of the State, as, under this theory, for example, neither the Tax Commission nor the Secretary of State would have had the authority to collect gasoline taxes, consequently neither could enforce the provision of the gasoline tax statute.

Without a construction of the law by the Supreme Court, it was impossible to determine which of the three theories was correct. To have forced an issue might have seriously jeopardized the revenues of the State. Consequently, to avoid controversy and to harmonize the first two of the theories above mentioned, as a temporary expedient, the Tax Commission adopted resolutions appointing the various agencies which were then administering these taxes to continue to administer these laws until these powers were revoked.

Fortunately, no effort has been made by any taxpayer so far as is known to the Tax Commission, to raise the question as to the authority of, for example, the Secretary of State in his own right either by virtue of the statute or as an agent of the Tax Commission to collect gasoline taxes and no question has been raised as to any other special tax. The situation is, however, one which has dangerous possibilities and regardless of the merits of the theory that all State taxes should be concentrated in a centralized body, all doubt as to the authority of some governmental body to administer these taxes should be dispelled by legislative action.

The Tax Commission recommends that the obvious intent of the Constitutional Amendment be carried into effect, namely; that the administration and collection of State taxes be centralized in the State Tax Commission. This was one of the principal recommendations of the Tax Revision Commission of 1929 whose report formed the foundation of the Constitutional Amendments which were submitted by the special Session of the 18th legislature in 1930 and adopted by the people at the general election in November of that year. We can do no better than to quote the recommendation of the Tax Revision Commission in this respect:

> "It will be observed that the present administration of special state taxes is widely scattered through various departments. Such a division of responsibility in administering special state taxes is unwise from several standpoints. In the first place, it undoubtedly costs more to administer these taxes through the various departments than it would cost if they were centrailized in one department. In the second place, the information relative to tax receipts is kept in a different manner by each department, thus making it difficult to secure information as to the status of all revenue receipts at any time. Finally, the lack of centrali-

zation in this administrative problem makes it difficult, if not impossible, to carry on a unified operation of the financial system of the state."

* * *

"We recommend that the administration of all state taxes be placed in the hands of the state tax commission in order that economy of administration and a unification of purpose can be effected in the operation of state finances. The present decentralized collection and administration of special state taxes is such that if it were in a business concern it would never be tolerated. We believe that business methods which have demonstrated success in the world of corporate finance should be introduced into the operation of state finances. This can be accomplished through the centralization of the state's finances in one department. It will bring economy, efficiency, and unity and will make it possible for the governor or for any other state officer to ascertain at a moment's notice the financial status of the state."

As stated above, the Tax Commission superseded the State Board of Equalization and assumed all of the duties and functions of that Board, together with many others which were added by the Legislature of 1931. Necessarily, these added duties increased the labors of the Tax Commission, as compared with those of the State Board of Equalization and with it substantially increased the cost of operation. While the income and franchise Taxes are the only taxes which the Tax Commission has been required to administer (except nominally and under the delegation to the other State officers as above described) which the State Board of Equalization did not formerly have, its duties with respect to the administration of the property tax were very greatly increased and with it the expenditures. These additional duties and powers will be dealt with specifically further along in this report.

As presently organized, the Tax Commission has set up two main departments, the Property Tax Department, in which are handled all matters relating to ad valorem property taxes, and the Income and Corporation Franchise Department. The Property Tax Department handles the assessment of all mines, utilities and other properties which

the Tax Commission is required to assess in the first instance. It also handles all matters of supervision of County Assessors, County Boards of Equalization and County Treasurers in the assessment, equalization and collection of property taxes, review of local tax levies, appeals from County Boards of Equalization, state equalization, veterans and pumping plant exemptions and generally all matters relating to property taxes of which the Tax Commission has under the law any jurisdiction. The Income and Corporation Franchise Tax Department handles exclusively the details of the assessment and collection of the income and corporation franchise taxes.

While these departments exist and separate accounts of costs are kept by each, they have been set up in such manner as to permit the shifting of work and the transfer of personnel from the one to the other as much as is practical for the purpose of eliminating as far as possible duplication of work and of spreading the work over the year so as to avoid the necessity of employing large numbers of extra help for comparatively short periods of time.

THE PROPERTY TAX

Inasmuch as approximately 80% of the total revenues for the support of government in Utah are derived from the property tax, and consequently the administration of this tax overshadows in importance any other single tax, we will take up first the problems confronting the Tax Commission and the State in general in this field, and our recommendations with respect thereto.

In brief, the administration of the property tax involes three major steps: (1) Assessment; (2) Equalization, and (3) Collection. Numerous public officers and bodies participate in each step, but the principle for the guidance of the action of each officer is the mandate set forth in the Constitution requiring, *the equal and uniform assessment and taxation of all tangible property in the State*, except as exempted or otherwise authorized by the Constitution. Each step in the process from assessment to collection is in theory at least, provided as a means of attaining the end "that every person and corporation shall pay a tax in proportion to the value of his, her or its tangible property."

In practice, the complete attainment of this ideal, involving as it does the use of human agencies, liable to error

and susceptible to appeals to cupidity, sentiment and other natural feelings, is impossible, so that the most that can be expected and hoped for is a constant improvement in method and machinery by which this ideal can be approached. This has been the aim of the Tax Commission and has been generally the aim of the local officials with whom we have been brought into contact during the past two years. So long as this principle has been kept in mind in dealing with specific problems, the path is reasonably clear, but only too frequently the pressure upon the sympathies of the officer concerned has been so great as to obscure the principle and magnify the interest of the individual until it apparently outweighs the interest of the public.

The first step in the process is that of assessment. The County Assessor is empowered by law to assess the bulk of the property of the State, the homes, real estate, buildings, livestock, household furniture and other personal property of most of the individual inhabitants of the State. The Tax Commission is charged with the duty of assessing the property of mines, public utilities, car companies and certain other properties which by reason of a unity of operation in more than one county can presumably be assessed better by one assessing body than by two or more separately elected county assessors acting independently.

In 1931, the total assessed value of property assessed by the State Tax Commission amounted to $200,764,000 out of a total assessed value of $618,404,000, the remainder having been assessed by the twenty-nine County Assessors. In 1932, the assessed value of property assessed by the Tax Commission was $183,915,000 out of a total of $575,386,000.

Since these assessments, made by the twenty-nine County Assessors and the State Tax Commission, constitute one base for all State levies, which will equal from ⅛ to ⅓ of the average annual taxes levied against all property, it is extremely important that the assessments made by each of the separate assessing agencies be made upon the same basis. If this is not done it is possible to have the situation of property being assessed in one county at 25% of its value and in another at 100%, resulting in the latter paying a state tax equal to four times the state tax collected from the former and to the obvious violation of the Constitutional requirement of uniformity and flagrant discrimination against property in the latter county.

As to local taxes, it is of course likewise important to have all property within a county assessed on the same basis or ratio of value and for the same reason, since the combined assessments made by the Tax Commission and the County Assessor form the sole basis for local taxation as well as state taxation.

To insure this statewide uniformity of assessment, the Constitution and laws have set up the scheme of equalization, within a county, by the Board of County Commissioners sitting as a Board of Equalization to adjust and equalize the assessments made by the County Assessor, and of statewide equalization by the State Tax Commission, sitting as a board of equalization with power, to be exercised under certain conditions and regulations, to adjust assessed values to a common statewide standard by means of either blanket adjustments affecting entire classes of property, or by single adjustments affecting particular properties.

The problem of equalization of assessments is the most important as well as the most difficult of the problems presented to the public officers charged with the administration of tax laws. Inequality of assessments is, in the opinion of the Tax Commission, the principal cause of the complaints against the property tax system. While most of the complaints and objections appear to be directed against the excessive burden of taxation beyond the productive capacity of property, this situation is, in normal times at least, a result rather than a cause, and the principal cause is the discriminatory underassessment of classes or items of property resulting in a larger burden of taxation upon the remainder.

In periods of depression such as this State with the rest of the Union has been experiencing during the past three years, this result is magnified, and while we do not wish to imply that with perfect assessment and equality, the tax burden would not be heavy, particularly under existing economic conditions, we are confident that the redistribution of the load would result in a great measure of relief.

The investigations made by the Tax Commission during the past two years indicate that the necessity for equalization of assessments is not confined to equalization between counties. If it were, the problem would be tremendously simplified. Given a reasonably good initial assessment by the County Assessor and the task of relating and comparing

it to similar assessments in other counties does not present the difficulties that are found in the situation which undoubtedly exists at this time, the correction of which the Commission considers of paramount importance; namely, haphazard assessments in many of the counties, with ratios of assessed value to true values ranging in particular instances from nothing to four hundred per cent. This is literally true, as anyone who will take the time to investigate can prove to his complete satisfaction.

The fault for the existence of this condition does not lie entirely with the County Assessor although presumably each annual assessment is the act and responsibility of the Assessor then in office. The variety of property which the County Assessor is required to value is such that a scientific appraisal of everything is impossible without the help of assistance beyond the means of the funds placed at the disposal of the County Assessor. Moreover, the limits of his budget do not allow him to do much more than keep up with additional or new construction, to say nothing of adjusting for fluctuations in value of property already on the books. Again, at times, the adjustments made by a County Board of Equalization will impair rather than improve the assessment originally made by the Assessor. But whatever may have been the cause, the fact remains that in practically no county of the State is there much uniformity of assessment in respect of large classes of property except in those counties where the real estate has been properly classified and where improvements have been reappraised under some systematic plan.

Particularly is this true in the case of improvements where original assessments have been made by different assessors, each with his own idea, both as to true value at the time and also as to some percentage thereof which he has accepted as proper for taxation purposes in his county.

During the past two years, the State Tax Commission has devoted its efforts to the correction of this situation. It has believed and still believes that the greater prospect of success in this direction lies in cooperation with the local authorities, particularly the County Assessors and County Commissions, and in general such cooperation has been cheerfully given. In fact, in most cases, the County Commissioners and Assessors, once their attention has been called to the situation, have appreciated the necessity for equalization and have requested the assistance of the Tax Commission to carry it into effect. There have been more requests from County authorities for help in this line than the Commission has been able to give.

Without a reasonably uniform and equitable original assessment as a foundation little can be done. While the laws passed during the 1931 Session of the Legislature authorized the Tax Commission to revise and correct individual assessments, this authority has not been exercised (except to the limited extent in connection with appeals which will be referred to later) for the reason that the actual good which can be accomplished by this means is so infinitesimal compared to the cost that it has not as yet appeared worthwhile. To exercise this power requires the valuation of each item of property, the notification to the owner and giving him an opportunity to be heard respecting the value. Limitations of time, if nothing else, preclude the possibility of great relief through this means, so long as the basic assessment is faulty in many particulars. On the other hand, if the basic assessment is reasonably equitable, the comparatively few cases of inequality can be effectively remedied through this means.

One of the objectives of the Tax Commission in connection with property assessments is to provide a common standard of valuation to all property throughout the State. While the statutes require "assessment at full value" they and the Constitution as well require "uniformity of value" and of the two requirements, "uniformity" is the more important. Of course, if full value assessments are attained in every case, complete equality will likewise be attained and both requirements satisfied.

Abstractly, it is immaterial whether all property is assessed at full value or at some fraction thereof. Practically, however, it is important particularly when statutes restricting levies and limiting public indebtedness are written in terms of percentages of assessed valuation. Theoretically, assessment should be merely a means of distributing the cost of government evenly among the property owners. Actually, it is used not only for this purpose but as a means of determining what the cost of government shall be.

That being so, the requirement for full value assessment cannot be disregarded as unimportant, but relatively, it must rank below the requirement of uniformity. More-

over, assessments at over full value are likely to be corrected through the protests of the abused owner, whereas, underassessments are rarely detected except through the vigilance of the assessor or the activities of a dissatisfied neighbor or competitor.

For these reasons, the Tax Commission has felt justified in concentrating its efforts to obtaining a uniform assessment at some ratio of "true value" less than the "full true value." Many problems are presented in this task. One of the first is the adoption of some common standard of measurement of value to be applied to all like property in the State. By this we do not mean that the same value must be applied to like property wherever situated, but that assessors and assessing bodies should work along standardized lines with the single objective of determining the actual value of the particular item of property being assessed. Without some such standardization of methods and objectives, assessment is likely to be a conglomeration of the heterogeneous ideas of as many assessors, deputies, and county commissioners as have ever had a part in the making of any of the assessments at any time.

Definitions have been laid down by the statutes and by the courts. In this State, the statutory definition is that "value" and "full cash value" mean "the amount at which the property would be taken in payment of a just debt due from a solvent debtor." But this definition does not materially assist an assessor in determining the value of a particular piece of property, land or improvement or both, of which there is no exact counterpart anywhere else and which its owner is perfectly satisfied to retain but which no other person is eager to acquire.

Some method must be devised to enable an assessor to arrive at a conclusion as to the value of such property, and unless the method is given him by law or other superior authority, he will adopt one of his own which as like as not will be totally different from the one adopted by the assessor of the adjoining county or by the deputy working in the next precinct.

From the preliminary surveys made, the Commission determined that improvements, houses, buildings, etc., constitute the largest class of property in the assessment of which inequalities existed susceptible of correction by the adoption of a common standard of measurement and valuation. Such a systematic appraisal of improvements has been adopted in Cleveland, St. Paul and other communities and states with considerable success and it was determined that a similar system, adjusted to meet local conditions, could be adapted and used in this State to advantage. Studies were made and with the help of experts in the line of construction and building, the first systematic appraisal of buildings and improvements was made in Rich County, with the full and hearty cooperation of the officials of that county, Rich County was chosen as the first subject of the test appraisal because its size permitted the completion of the job within a comparatively short time, and because the preliminary survey indicated such a need for revaluation that the local authorities and many of the inhabitants were anxious to see it undertaken.

The results in this county were interesting. During the progress of the work, defects in the plans originally laid out and in the methods used, developed, which were corrected, all of which will serve to perfect the system. When the work was finally completed and values computed and applied to properties affected, the results were submitted to critical examination by property owners from all parts of the county, not only for comment and criticism of the methods employed but also as a test of the reaction of the public to the results. Many of those to whom the results were submitted were owners of property, the valuation of which would be increased as a result of the work, in some cases as much as three to four times, but notwithstanding this it was recommended to the County Commissioners to put the revaluation into effect for the assessment of 1932 and not a single dissent was expressed.

This reappraisal does not, of course, deprive either the taxpayer or the County Board of Equalization of any right to change the valuations in the event of an error in calculation, of measurement or of valuation. It does, however, greatly facilitate the County Board in its work of equalization as, because of the survey and measurements taken and recorded, the Board can accurately compare properties one with another and can with some degree of certainty ascertain whether an error has been made and if an adjustment is required. The same thing can be said of the taxpayer. He does not have to rely upon his own impressions and neighborhood rumors. He can, upon inquiry, ascertain the figures and measurements upon which his neighbors' val-

uations were fixed and if the work has been properly done, without question it will eliminate many complaints which exist only in the imagination of the complainer but which are very difficult for the Assessor and County Board of Equailization to dispose of.

The result of this revaluation was an increase of approximately 17% in the valuation of all improvements of this class in Rich County over that of the preceding year, no part of which was represented by new construction. Many items were reduced, the survey disclosing rather startlingly that there had been a tendency to overvalue old structures and undervalue new improvements. This same tendency has been indicated in subsequent surveys in other counties.

At the same time, revaluation work along the same lines was being carried on in Wayne, Emery, and Carbon Counties. In Carbon County the work has been carried on by the County Assessor and his assistants under the supervision of the Tax Commission. In Wayne County, the Tax Commission participated to a greater extent.

In Carbon County the work resulted in a very small change in total assessed value, but involved many increases and decreases in the assessment of individual items.

At the present time, improvements in Ogden City are undergoing a revaluation survey under the direction of the Tax Commission and with the active and intelligent assistance and cooperation of the Board of County Commissioners of Weber and the County Assessor.

In general the method of revaluation consists of the determination of the cost of reproduction of the building or other improvement under consideration based upon average costs on a given date of materials, labor and other items of expense entering into the construction, from which cost depreciation is deducted according to a scale adapted to local conditions and the character of the improvements involved. Other factors are taken into consideration when required, such as unusual depreciation due to lack of ordinary care, obsolescence and any other factor which has a material effect in determining the value of the building, but for the vast majority of cases the basic costs are applicable without special adjustment.

This method does not necessarily arrive at a figure which could be said to be true value without adjustment either up or down as conditions may require, but it will arrive at a uniform basis of valuation which can be adjusted as market and other conditions may warrant.

As to improvements, which constitute a tremendously large bulk of the tangible property in the State, such a method of revaluation on the basis of reconstruction cost can be applied with reasonable success and will, when properly done and by the use of the same basic methods of measurement and computation throughout the State, practically insure a uniformity of assessment of property of that class. As to other classes of property other methods must be applied but it has been the aim of the Commission to devise and suggest methods of appraisal, wherever possible, which will in the end enable the assessor of each county to arrive at the full cash value of each parcel of land or item of property which he is called upon to assess.

It is firmly believed that by proper classification of agricultural lands, and of city real estate, similar uniformity of assessment can be obtained of all property in those classes respectively, and efforts are being directed to this end.

With respect to certain other classes of property, particularly range livestock and automobiles uniformity can be obtained with a reasonable degree of certainty with the cooperation of the local authorities. As to other classes of property, for example household furniture, machinery, etc., there can be little hope of perfecting a system of valuation which will assure the same degree of uniformity as in the case of improvements, automobiles and livestock. As to these classes, of necessity the assessor must depend upon his own resources to ascertain the value, and to place it upon the rolls.

The continuation of the work which the Tax Commission has commenced along the lines mentioned above will involve some expense which the Tax Commission is convinced will be justified by the results. The present economic situation will undoubtedly prevent the appropriation of sufficient funds to push the work forward with the speed required to obtain the best results, but we believe that an appropriation sufficient to carry the work forward with the same staff and at the same rate of expenditure with which it has been done during the past biennium will be fully justified, and we earnestly recommend this action.

EXEMPTIONS

The years 1931 and 1932 have been years of declining values and incomes, directly reflected in a decline in the revenues of the State. In 1930, the assessed value of taxable property in the State was seven hundred and twenty-eight million dollars; in 1931 it was six hundred and eighteen million dollars, a loss of one hundred and ten millions, and in 1932 it was five hundred and seventy-five million dollars, a further loss of forty-three millions. Meanwhile, the necessary expenditures of the State have not declined to the same extent, and in fact the cost of several essential activities of government have increased because of the economic distress. This situation has already caused a severe strain upon the budgets of the various taxing units which has not been helped by the policy adopted by the Legislature of 1931 of enlarging the class of exempt properties and persons.

In interpreting the tables of assessed valuation of property in the several counties and in the State, which are appended to this report, it should be borne in mind that not all of the property included in the totals is subject to taxation, and reliable estimates of future revenues from the property tax must take this fact into consideration.

The Veterans' Exemption Law, Chapter 40, Laws of 1931, was passed at the 1931 Session of the Legislature and its effect is first appearing in the statistics for the year 1931. Under this law, property owned by disabled veterans and by their widows and minor orphans, is exempted to a certain extent depending upon the degree of physical disability of the original veteran with a maximum exemption for a totally disabled veteran or for the widow of a deceased veteran, or for the minor orphans of a deceased veteran, of $3,000. Since these exemptions are made upon annual application, the value of the property exempted appears on the assessment rolls and is included in the totals shown in the tables attached. The actual assessed value of properties exempted under this law and the loss in revenue therefor is separately shown on page 260.

It is to be expected that these exemptions will grow in numbers as well as in amounts from year to year. The law was passed shortly before May 1, 1931, the date upon which applications had to be in the hands of the County Commissioners to make the exemption available against the assessment for that year. Because of the short time intervening, many persons otherwise entitled to exemption failed to present their applications in time for action. In 1932, many again failed to obtain exemption because of their failure to renew the applications made during the previous year. As the provisions of the law become more generally known, an increase in number of applications for exemption can be expected.

Since the disability need not be of service origin it is also to be expected that additional applications will be made by veterans now disqualified because they are not disabled, and by the widows of veterans who may have died since the passage of the Act. With the passage of time, it is likewise to be expected that the rate of disability established will increase and with it the amount of property to be exempted. For these reasons, it is reasonable to expect that for the next 25 years at least we shall see an annual increase in both numbers of veterans and relicts claiming exemption under this law and in the amount of exemption claimed.

One defect which the Tax Commission sees in the method of rewarding war service through tax exemption alone, is that the reward is given to those who, since they possess property, presumably have some private resources, while no reward is provided for the more needy, but equally deserving, individuals who are so unfortunate as to possess nothing.

PUMPING PLANT EXEMPTIONS

Another form of exemption which must be considered in analyzing the statistics is the exemption authorized by Chapter 41, of the Laws of 1931, of that portion of property used in generating and distributing electricity which is used for generating and distributing power for irrigation purposes. The benefits of this exemption are not given to the owners of the property exempted, but to the users of power for irrigating lands in proportion to the amount of power used by them for that purpose. Separate tables have been prepared showing the effect of this exemption, and since the exemption is made after the assessments are made, the deduction does not appear in the tables of assessed values.

The results of this exemption as shown by the tables are significant. It will be seen that the property exempted

is not always in the district where the users of power reside, and that in consequence there is a loss of tax revenue to one county or other taxing units for which there is no direct compensating gain to its citizens or property.

One taxing unit has, by reason of this law, lost considerable revenue upon which it has become accustomed to rely to meet its governmental necessities. The other taxing units, the county, and the school districts in which are situated the lands irrigated, find themselves benefited ultimately by increased valuations. The individual owners of these lands are of course benefited by the amount of the refunds they respectively receive. Ultimately, the situation will be adjusted, but in the years of change, coming coincidently with the period of depression, this shifting of tax value has without doubt materially added to the difficulties of certain governing bodies already overwhelmed with the problem of maintaining the essentials of government and at the same time satisfying increasing demands for direct relief, with funds, curtailed to begin with, and in the face of insistent demands for tax reduction.

Another interesting fact developed by the statistics upon the Pumping Plant Exemption Law, is that the benefit to the pumper, expressed in percentages of his pumping bill rebated, is not the same in all localities. For example, a pumper using power from the Dixie Power Company (now the Southern Utah Power Company) in 1931, received a rebate equal to 33.84% of his pumping bill for that season whereas a pumper under the Telluride system received 15.54%, and pumpers under the Utah Power & Light system, paying rates based upon a scale depending upon the amount of power used, received variable amounts, averaging $.00148 per KWH. The reasons for these differences lie in the fact that the ratios of irrigation power consumption to total power consumption are not the same under the various systems, and also in the fact that in some cases power is sold on a flat rate basis of so much per KWH or horsepower, while under another system it is sold under a sliding scale depending upon the amount used. Another unique feature of the law is in the way it distributes the benefits of the exemption among the users of pump power. For example, due to the fact that under some systems users are charged rates which decrease per KWH with increased consumption and the benefit is distributed, not according to cost but according to amount of power used, we find that

one person was charged $127.50 for 480 KWH used, upon which he received a refund under this law of 92c, while a neighbor who received power from the same system was charged $129.40 for 6,507 KWH and received a refund of $12.50. Under such a system it works out that the person who uses the most power gets the power at a cheaper rate and, of course, gets a larger rebate. The small user pays a high rate and gets little rebate. Of course, without further data, these illustrations prove nothing with respect to the merits or defects of the present law. It may well be that the differences in rate schedules established by the several companies, may tend to equalize the benefits as between pumpers, and of course a knowledge of the pumping cost for the irrigation of a given tract of land is vital to the true appraisal of the law and no information on this subject is contained in the statistics.

Whether or not this exemption should be retained is a matter of public policy to be decided by the legislature, but in view of the apparently illogical distribution of benefits thereunder among the users of water themselves, and the complete absence of reliable information so far as we are aware, as to any substantial differential of irrigating costs per acre of land or per unit of crop between users of gravity water and users of electrically pumped water, the Tax Commission is inclined to view the law with suspicion as creating an illogical and unwise discrimination in favor of certain individuals and a consequent burden upon the others. The identity of those individuals who obtain the benefit is apparently determined by accident and not as the result of any preconceived plan of public policy. For these reasons the Commission recommends the repeal of this law and the substitution (if public policy does require the preferential treatment of pump irrigators) of a law which will equitably distribute the benefits among that group.

In any event, the Commission recommends that the law be amended so as to restrict the losses in tax revenues to those Counties, or even to lesser taxing units if that be practicable, in which are situated the lands upon which the water is used. In this way, the exemption and consequent loss of revenue will theoretically at least be compensated for by some gain in assessed value for taxing purposes which will enure to the unit which suffered the loss. In addition, that taxing unit, will as it does now, share in the economic

benefits which, if the measure has the merits which its proponents claim for it, will accrue to its inhabitants and owners of land within its boundaries.

APPEALS

One of the new functions of the Tax Commission is the hearing of appeals upon assessments of property. Technically, these cases are appeals from decisions made by County Boards of Equalization upon protests made by taxpayers against the assessment by the local assessor. Under the former law the only resort of a taxpayer dissatisfied with his assessment was to the courts.

During 1931 but one appeal was made to the Tax Commission, presumably, because the law had but lately become effective and the remedy was not generally known to exist. During 1932, however, 83 cases were appealed to the Tax Commission of which 51 were appealed from Cache County where the County Commissioners had denied a request made by a number of property owners in Logan City for a reduction of 25% from the assessments of the previous year.

These cases, presenting as they do, attacks on particular assessments, and involving examinations of the properties involved with as much care as is possible in the limited time allowed between the date when the decision of the County Board is made (around June 20th) and the date when the Tax Commission must render its decision (the last Monday of July) afford an excellent opportunity for the Commission to discover inequalities in local assessments and to measure the standards of assessment of one county against another, apart from the possibilities it affords of providing a protection against overassessments which the local Boards of Equalization are unable to rectify during the twenty-day period they are authorized to sit for the equalization of assessments. During that time, in some counties, thousands of cases are presented for their consideration and it is humanly impossible for that board to do each case full justice. It has also afforded an opportunity to the Commission to test the accuracy of its own methods of valuation against competitive attack in contested cases. The results have demonstrated weaknesses in the methods originally adopted by it and have accelerated the perfection of the methods which will, it is hoped, be ultimately adopted.

The Logan cases afforded an opportunity to raise the valuations in certain cases to figures which it seemed were comparable with the assessed valuation of other property in that locality. However, it is to be expected that comparatively few appeals hereafter will find their way to the Tax Commission which will result in increased assessments. There is more likelihood that only such cases will be appealed as are clearly cases of overassessment.

This phase of the work is one which will probably require a larger staff and a greater expenditure of time, labor and money than has been given it in the past two years, particularly if economic conditions continue to be as difficult as during this period. A careful consideration of each case, which each appellant is entitled to expect, will require a visit of at least one member of the Tax Commission to the locality in which the property in controversy is situated, an examination of it and of other comparable property by its experts and appraisers and a hearing of the testimony offered in support of the appellants claims. Since in all of these cases it can be expected that the appellant will not be anxious to present any testimony except that which will support his own contentions, the Commission must in order to get an accurate picture of the situation make this investigation on its own initiative, or otherwise there will be but one side presented. The County Assessor and the County Board of Equalization might be expected to be anxious to sustain their previous decisions and no doubt are in most instances, but too frequently the County Assessor's office is not financially prepared to rebut the testimony offered by the appellant, and the County Commissioners are too much engrossed in the other affairs of their county to interest themselves much in the defense of their decisions on matters of equalization. Consequently, it falls upon the Tax Commission alone to make as complete an investigation as is possible in the short time allowed and very frequently it appears that the Commission is in the position of prosecuting and deciding in the one case. This situation seems to be unavoidable unless and until a procedure is developed in the county offices of detailing counsel to properly represent the public's interest in these cases as opposed to the interests of the individual taxpayer whose case is being heard. The Commission hopes that experience will provide the solution of this question without the necessity for further legislation.

One other feature of this matter deserves mention, and that is the necessity of providing a dead-line for the filing of appeals. Under the existing law an appeal must be filed within five days after the decision is made by the County Board of Equalization. The sessions of the Board are limited to twenty days and frequently, particularly during the past two years, the County Board has been so deluged during that time with appeals for reduction of assessments, that they have been unable to consider or act upon them within the twenty days. The result has been that in many cases the decision upon the taxpayer's complaint is not made until late in July (too late for a hearing and decision by the Tax Commission before the last Monday in July and before the tax levies are required to be made) and more frequently the taxpayer has received no notice that his complaint has been denied or decided in a manner which does not satisfy him until after five days after the decision was made and consequently too late for him to appeal. In view of this, it seems necessary to amend the law so as to provide that for the purpose of appeal alone, unless a taxpayer's complaint has been decided by the Board before that time, it will be deemed to have been denied on the last day of the sessions of the Board of Equalization, and without notice to him. Thus, if the taxpayer decides to take advantage of the right to appeal to the Tax Commission, he will be obliged to do so within five days after the closing session of the Board at the latest, thus giving the Commission the maximum of time to hear and dispose of all the cases which may be brought up from the several counties.

SETTLEMENTS OF DELINQUENT TAXES

One of the innovations of the 1931 Session Laws was the amendment of Sec. 6054, Compiled Laws, so as to require the concurrence of the Tax Commission with the Board of County Commissioners in the compromise of a delinquent tax claim for less than the full amount of the taxes, penalties, interest and costs, due where the amount involved is $250 or more. Only in cases where the interest of the state and of the county will be subserved by the acceptance of a less amount can compromises be made at all. In cases involving less than $250, the Board of County Commissioners are the sole judges of whether or not the interests of the state and county will be subserved by a settlement.

The indiscriminate practice in some counties of compromising these tax claims for any or no reason at all to such an extent as to have become a scandal was the apparent reason for the amendment. One of the first matters to come before the Tax Commission was the consideration of applications for such compromises and it was then determined that the interest of the state and county does not require the payment of interest and penalties by one person and the remission of such charges to another. Consequently, the Tax Commission has adopted as a general rule for its guidance in the consideration of such applications, the principle that if the property involved is substantial security for the collection of the delinquent tax in full, that is if the present value of the property is such as to assure the payment of the full tax and penalties immediately or in the reasonably near future, the interests of the State and County will not be promoted by discounting the same and accepting less. Moreover, since one of the primary causes of discontent against taxes is due to discrimination, either real or imaginary, it is the firm conviction of the Commission that a prolific source of such dissatisfaction will be eliminated by the firm enforcement of the tax laws against all alike without favor or discrimination.

The Tax Commission has no objection to the compromising of delinquent taxes so long as all who are similarly situated can be granted the same relief. But in this case there is and can be no uniformity of rule applicable to all unless it be the rule of financial interest. In most of the cases in which the Tax Commission has been requested to concur with the County Commissioners on a tax compromise, the County Commission has acted upon the desire to help the individual out of a dilemma into which he has fallen by reason of his failure to pay some taxes justly due. These motives upon the part of County Commissions are of course laudable, as no doubt many of the cases are deserving of charity, but so long as it is an utter impossibility to recognize through tax abatements the needs of others equally deserving, who have paid their taxes with perhaps full penalties, it is decidedly unjust to attempt to distribute charity in this way.

Many cases indicate an attempt on the part of the County Commissioners to project their judgment into the past and to correct real and assumed discrepancies of assessments occurring in past years. The Tax Commission

recognizes that hindsight is usually much more accurate than foresight, but since it is impossible to rectify the thousands of other cases (practically the whole of the annual assessment) whose taxes, based upon the beliefs of the then county officials, demonstrated by subsequent events to have been erroneous as to value, it seems unfair to give to the one person who has failed, for whatever reason, to pay his taxes an advantage over his fellow citizens who paid promptly.

In the opinion of the Tax Commission, the existence of a law which authorizes any administrative body to compromise delinquent property taxes is of doubtful value. While we can readily concede the desirability of providing a tax system with sufficient elasticity to correct injustices and inequalities which are bound to exist in the most perfect organization, we believe that these corrections should and can in most instances be made by administrative bodies while the tax is current and before delinquencies occur.

Our property tax laws have always provided ample opportunity to the taxpayer to present his claims of overassessment to the proper officials, and grant these officials ample power to correct and adjust such claims when presented at the proper time. The necessities of public business require this work to be done and completed during the current year in order that the various administrative bodies may have a reasonably reliable and stable estimate of public revenues, and if the taxpayer has failed to present his claims witin the time provided, in the last analysis, the fault is his as much as that of the officials.

In view of these objections, the Tax Commission is of the opinion that Sec. 6054 should be repealed in its entirety. This would not prevent the giving of relief in urgent cases. These could still be handled more directly and efficiently by appropriations for the payment of taxes. In this way, the purpose and amount of the rebate will be made a matter of public record and will not be concealed in the myriad of tax transactions, and the cost distributed among tax units which have other troubles of their own.

Recently several cases of what appears to be flagrant violations of the law on the part of County Commissioners, have come to the attention of the Tax Commission. These violations consist in at least one instance in the County Commission issuing instructions to the County Treasurer to accept a sum in settlement after the proposition had been

submitted to the Tax Commission for its approval and such approval withheld. In other cases, taxes have been compromised without submission to the Tax Commission and without affording it an opportunity to pass upon the question of its effect upon the interests of the state and of the county. In all of these cases, it appears that the County Treasurer has accepted the instructions of the County Commissioners as complete, ignoring the plain provisions of the law which requires the concurrent action by the Tax Commission.

Action is now being contemplated with a view to reinstating the tax liens which have been illegally released by the improvident acts of County Treasurers in these cases, and further action is contemplated for the ultimate purpose of compelling future county officials to comply with the plain provisions of the law. Unless observance of the law by public officials can be insisted upon and violations punished, little hope for improvement in tax administration can be expected.

PARTIAL PAYMENTS

During the year 1931, many representations were made to the Commission to the effect that unless some provision was made to permit the payment of taxes in installments, a very large number of taxpayers would, of necessity, be compelled to allow their taxes to go unpaid and the operations of the government would be seriously hampered. For many years efforts have been made to obtain legislation to provide for the payment of taxes in two or more installments. These efforts have been uniformly defeated, primarily because the measures proposed contemplated the postponement of the deferred installments beyond the present tax date, and the readjustment required to coordinate state and municipal finances to the later date would cause serious and expensive difficulties.

Throughout Utah, the common understanding among county officials and the public in general has been that the law required the payment of the whole amount of the taxes assessed against a particular parcel or item of property in one installment, and County Treasurers deemed it unlawful to accept anything less than the full amount, except as a favor to the individual, in which case he would defer placing the amount received to the credit of the county until the remainder was paid, and if the balance was not paid before the delinquent date, it would be returned to the taxpayer.

After a study of the law applicable, the Tax Commission determined that there was no legal basis for this understanding and that if Treasurers could be persuaded to accept payments on account of taxes in advance of the date of delinquency, a substantial amount would be paid in which would otherwise be allowed to go delinquent. Reputable legal counsel differed from this conclusion, and maintained that the acceptance of payments on account would jeopardize the tax liens on the property for the unpaid balance, which, if true would seriously cripple the municipalities later on. Because of this difference of opinion the Tax Commission decided that the only safe procedure to adopt was to present the question to the Supreme Court for its construction of the law. Accordingly, when notified that the Treasurer of Weber County had expressed his intention to accept payments on account, the Commission commenced a suit on the relation of the State of Utah in the Supreme Court in prohibition to restrain him from carrying out that intention, taking the position in that case that such procedure would invalidate the tax deeds subsequently to be issued for the unpaid balances and would prejudice the State and municipalities in the enforcement of their tax liens.

The issues were presented and argued to the Supreme Court resulting in the rendition of an opinion by that body affirming the authority of the County Treasurer to accept payments on account of taxes and effectually dispelling all doubt as to the validity of the tax deeds.

It has been impractical to ask County Treasurers to submit reports of their collections on 1931 taxes in partial payments, but the Commission has been unofficially informed by numerous treasurers that substantial amounts have been so collected and that in their opinion many of those who had paid part would have paid none except for this privilege. The advantages of this procedure both to the individual and to the government are obvious. It permits the individual (and corporation, of course) who is unable to pay his entire tax bill, to pay what he can and reduces the amount upon which the heavy penalties are imposed for delinquency. On the other hand, it undoubtedly has aided the government in collecting a larger percentage of its anticipated revenues at the due date and thus eliminated the necessity for expensive temporary borrowing to just that extent.

A further extension of this principle should be made. Under existing laws, property taxes are payable the second Monday in September and delinquent the last day of November at which time, if not paid, a penalty of three per cent of the amount of the Tax is immediately added. While the taxpayer has over two months within which to pay his taxes and may, if the County Treasurer sees fit to permit him, pay them in two or more installments, there is no substantial inducement for him to prepay them and as a result substantially all taxes are collected in the last few days of November.

Realizing that efforts are likely to be made again at this time to pass some law providing for the payment of taxes in installments, the Tax Commission has been considering the proposition from another angle, that is, to induce the taxpayer to prepay his taxes and so reduce the amount of borrowing required by the government.

Our investigations have satisfied us that such a plan is practicable from an administrative standpoint and should result in a substantial saving of governmental costs without penalizing the individuals who might be unable to take advantage of the privilege of prepayment. In substance, the plan is to give to each property taxpayer the right to prepay all or any portion of his taxes at any time during the year and before they become delinquent and as an inducement to make a prepayment to give him a discount the size of which would depend upon the amount of his prepayment and the length of the period between the date of the prepayment and the date of delinquency.

The advantage of this plan seem obvious. If the rate of discount is fixed at approximately the amount which the government has to pay on tax anticipation borrowings, the result should have the effect of borrowing from the taxpayer instead of the bank or a financial institution and the taxpayer would receive the interest which now is being paid to the bank.

It should also hold out an inducement to the taxpayer who can, to pay part of his taxes at various times during the year and so eliminate many of the losses which occur by reason of the taxpayer's having invested savings made for tax purposes in temporary investments which have turned out disastrously.

It should further have the effect of reducing the number of delinquencies which are expensive to the government and the handling of which is an appreciable item in the cost of government.

There are two possible methods by which such a plan can be put into effect. In each case the details could be modified to meet the desires of the legislature. The plan which would be the easier to put into effect is one which will permit the taxpayer to prepay his taxes before they have been definitely fixed and ascertained. This plan would require no change in the present calendar of assessment, equalization, levies, etc. The other plan would be to advance the date of payment of taxes from September until July and to permit the taxpayer to prepay only during the months from July until December. Such a plan as this requires changes in the calendar of duties of nearly every governmental agency involved in the assessment, levy and collection of taxes. For example, it would require the Assessor to complete the work of assessment earlier in the year than he is now required to do so. It would require the officers of municipalities and County Commissioners to determine the rate of taxes at least a month earlier than they are now required to do.

Each plan, however, has its own advantages and, of course, will have disadvantages, some of which can be anticipated and others which may not develop until it has been placed in operation, but it is the belief of the Commission that either will result in some saving in governmental costs and considerable convenience and advantage to a large body of taxpayers.

PARTIAL PAYMENTS OF DELINQUENT TAXES

Following the principle laid down in the case above mentioned, State of Utah ex rel State Tax Commission vs. D. W. Evans, County Treasurer, the Commission later made a study of the laws relating to the payment of delinquent taxes. Here, too, it had been the prevailing opinion and understanding among county officials and others that the laws required the full payment of the amount of delinquent taxes and penalties in one payment. It is undoubtedly true that the law does require such a payment before redemption can be made, but this was construed as a prohibition against accepting any lesser amount on account. Naturally the result was to defer in many cases the redemption of property and consequently to increase the burden of penalty interest upon the owner, and in some cases to deprive the owner of his right to redeem by accumulating the interest charges faster than he could accumulate the money with which to redeem.

A study of the laws convinced the Commission that so long as the period of redemption was not extended, and so long as the government ultimately received the full amount of the delinquent taxes and interest upon the same for the time any portion remained unpaid, there was nothing to preclude the Treasurer from accepting at any time any such amount as the convenient operation of his office might permit. Accordingly, instructions to this effect were issued to all County Treasurers, these instructions containing details as to the method of accounting for the amount collected to the respective municipalities interested in the taxes.

Since in certain cases, the lien for delinquent taxes is sold by the County to third parties for whom the County Treasurer acts merely as a collecting agency in receiving and handling money paid in for redemption, it was deemed impossible to make these instructions apply to other than cases where the county itself held the certificate of tax sale. Quite frequently, these certificates of tax sale are held for investment purposes and it seemed beyond the power of the Tax Commission to issue regulations which would require the holder of such certificates to make daily inquiries at the treasurer's office for possible partial payments on his investment, without express sanction of law. However, the Commission believes that an amendment to the present law to expressly authorize such partial payments in all cases would be advantageous and would not unduly retard investment in such paper, which it must be admitted, is of considerable importance in public finance.

The Commission is likewise advised that the revision in practice following this instruction which was issued in July, 1932, is already demonstrating its advantages. While some additional work is thrown on to the County Treasurer's office in bookkeeping and accounting, we are informed by the Treasurer of Salt Lake County that with reasonable restrictions as to size and number of payments, the additional work can be done without appreciable additional expense, while the advantages to the taxpayer are quite obvious.

FURTHER RECOMMENDATIONS

The existing economic distress has produced many panaceas for the relief of the situation, most of which attribute conditions to excessive taxation, and are designed to lift the tax load. Not a few of these go so far as to recommend the complete abolition of taxation for a period. Some are satisfied with a mere moratorium for all taxes, while others are less ambitious.

Undoubtedly, the present crisis requires some consideration of the question of delinquent taxes, but the question must be approached with due regard to the necessities of maintaining government. The alternative is anarchy. We do not disparage the necessity of curtailing government expenditures, but there are some expenditures which cannot be eliminated without the complete abandonment of government in organized society. Police and fire protection are essential if personal liberty is to be guaranteed and property rights protected. Other governmental costs are vital and the line of demarcation between essentials and frills is vague.

With these facts in mind, we recommend two measures which have as their object a measure of temporary relief from the consequences of the depression in so far as taxation is concerned. These are:

(1) The extension of the period for the redemption of property sold for delinquent taxes of 1928 and 1929 until 1935.

(2) The reduction of the penalty interest on delinquent taxes from 1 per cent per month to 8 per cent per annum for a period of two years.

The only justification for these recommendations lies in the present condition of affairs. The present law allows actually nearly four and one-half years of grace from the time taxes become delinquent until the property against which it is levied is in jeopardy. In ordinary times, it is doubtful whether such a long time is desirable, as the prompt collection of taxes is as important in the administration of government as is the prompt collection of accounts in private business. The delay makes for additional cost and expense.

But the present situation is not normal, and requires extraordinary measures and we believe that to afford those

who now find themselves confronted with the imminent prospect of losing their properties for nonpayment of taxes can well be given the comfort of two years extension of time without extending to all others an invitation to delay the payment of their taxes.

We also believe that the temporary reduction of the penalty rate of interest is justified in the present emergency and while the rate suggested approximates prevailing bank rates, it, with the initial penalty of 3 per cent, which should be retained, will not be so low as to encourage delinquencies.

Both propositions should be passed as emergency measures to expire by limitation so that the present laws would be automatically reinstated unless further extended by legislative action. If limited in their operation to two years, by that time the Legislature will again have met and can determine whether the necessity exists for a further extension in view of the conditions then existing.

REDUCTION OF PROPERTY TAX LEVIES BY SUBSTITUTION OF SPECIAL TAXES

During the past generation, levy after levy has been added to the property tax for various purposes, until the total amount of levies which now may be made on property has reached a figure which is excessive under the present circumstances. It is the opinion of the Tax Commission that this tendency to add levies on the property tax with nearly every session of the Legislature, should cease, and not only that, but some of the levies on property should be stricken off.

One example of this difficulty is found in Chapter 57, of the Laws of 1931, relating to the State school equalization fund. Section 2 of this Act provides:

> "The State Tax Commission is hereby authorized and directed to levy annually, a state tax for district school equalization purposes at such rate as will raise an amount which, when added to any other state funds made available for district school equalization purposes, equals as nearly as may be $1.00 for the school year 1932-1933; $2.00 for the school year 1933-1934; $3.00 for the school year 1934-1935; $4.00 for the school year 1935-1936; and $5.00 for each school year thereafter for each person of school age in the state as shown by last preceding school census. The levying and col-

lecting of said tax should be performed in the same manner and at the same time as other state taxes are levied and collected and shall be apportioned to the several school districts as provided in this Act."

Under the mandate of this provision, the State Tax Commission placed a levy of .26 of a mill upon all the taxable property in the state for the year 1932. This was a new and an additional levy upon property. Unless some change is made in the provision of the law relative to the raising of this equalization fund, it will be necessary to levy an increasing amount each year until the fifth year is reached. If the assessed valuation should remain stationary and if there were no increase in the school population, this would mean a total levy of approximately 1.3 mills for this particular purpose.

It is our opinion that the levy upon property for the state district school equalization fund should be abolished before it increases any further, and that the revenue for this purpose should be obtained from some means other than the property tax.

We believe that a tax can be quite properly levied upon certain selected commodities which are not essential to public welfare, to take the place of this property tax for the state district school equalization fund. Such a sales tax would be easily passed on to the consumer and if the tax were limited to commodities which are not essential to public welfare, the application of the tax would not create any hardship and at the same time it would relieve the property tax of the ever increasing levy for this particular purpose. Of course there are disadvantages in the operation of such a tax, but these are to be found to a certain extent in all tax systems. When we consider these difficulties on the one hand and on the other hand weigh the efect of an increasing tax levy each year for the next five years for the state district school equalization fund, we do not hesitate to recommend the enactment of a tax on selected comodities for the purpose of eliminating this levy on property.

THE INCOME TAX

The Income Tax was adopted in 1931 and the first returns were received in 1932. Consequently, while the tax has been in effect for nearly two years, conclusions as to its revenue-producing capacity must be based upon

one year's collections. Likewise, in making comparison between collections and expenses, it must be borne in mind that the expenses include all costs of organizing and equipping an entirely new department and of its operation over a period of nearly two years, while its receipts reflect but one year's collection. It should further be borne in mind that the statistics submitted with this report are based upon returns before audit. In other words, an actual audit of the return received may, and likely will result in a substantial increase in both taxes charged and taxes collected from this source. The work of auditing returns is well under way and will be practically completed by the time the returns for 1932 are due, but for reasons of office routine, it has been found impractical to defer the compilation of statistics until after the audit is completed.

The Tax Revision Commission of 1929 estimated the yield of the Income and Franchise Taxes which it recommended at $2,000,000, basing its estimates upon conditions existing in 1927 and 1928. The State Board of Equalization in its 17th Biennial Report, covering the years 1929 and 1930, submitted to the Governor and Legislature under date of December 10, 1930, estimated the yield of these two taxes for the first year of operation at approximately one-third of this amount. This estimate was made at the end of the first year of the present financial depression, before the Income and Franchise Tax Acts were actually passed and upon the assumption of the rates and other provisions of the laws recommended by it.

The laws actually adopted by the Legislature in 1931 departed widely from the recommendations of both the Revision Commission and of the State Board of Equalization in several particulars which materially reduced the yield of the two taxes. On the individual income tax, the rates proposed were graduated from 1 per cent up to 5 per cent, while in the Act adopted the rates are graduated from 1 per cent to a maximum of 4 per cent.

The law proposed did not provide for the so-called "property tax offset" while the Act as enacted allowed a full property tax offset up to but not exceeding one-third of the computed income tax. Each of these changes very materially reduced the yield of the income tax.

On the other hand, the law as finally adopted provided for the universal filing of returns and the payment of a fil-

ing fee of $1.00 with each return. This provided a source of revenue not anticipated by the Board of Equalization and probably did increase the yield of the income tax to some extent.

In the case of the Franchise Tax, the Tax Revision Commission proposed a flat rate of two and one-half per cent on net incomes from business within the State. The law enacted provided for a rate of three per cent but likewise provided for a property tax offset of all taxes paid but not exceeding one-third of the tax computed. It also provided that 21-24 of the amount of the Corporation License Tax paid for the year 1931-1932 be credited against the tax due, and the refunding of any excess. Both of these credits made very substantial reductions in the amounts collected under the Franchise Tax Law, but these losses were offset to a large extent by the addition of the so-called "minimum tax" feature which required from each corporation a tax in any event of not less than 1-20 of 1 per cent of the value of its tangible property in Utah.

It is exceedingly difficult if not impossible at such an early date to estimate the losses or additions to the yield of the tax recommended by the Tax Revision Commission occasioned by these changes, or changes in operating costs. It can be said with certainty that the addition of the universal filing feature to the law materially increased the cost of operation of the Income Tax, but is equally certain that the additional revenue produced by the filing fee fully defrayed not only this additional cost but also the entire cost of the operation of the Income Tax and the Franchise Tax as well and returned a surplus to the General Fund. With this true during the first year of operation, when dealing with a new law with which the people are unfamiliar and during a period of extreme economic depression, it is not unreasonable to believe that as the law becomes established and with the return of a reasonable degree of prosperity the yield of the filing fee alone for one year will more than defray the expense of administration of the Income and Franchise Taxes for a biennium, leaving the entire proceeds of the taxes based upon income net to be applied in reduction of the property tax as is contemplated in the Constitution.

We recommend that the property tax offset provision in the Individual Income Tax Act and also in the Corporation Franchise Tax Act be abolished. The question involving the continuation or the repeal of the property tax offset is

largely one of public policy. The actual operation of the offset should indicate a practical background for the determination of that policy. The following analysis taken from the records of the State Tax Commission shows the operation of the property tax offset upon the different groups of taxpayers who are subject to the income tax:

Gross Income Classes	Total Tax Before Offset	Offset for Taxes Paid on Tangible Property in Utah	Per Cent
Under $500	$ 133.00	$ 5.00	.038
$500 to $1,000	197.00	13.00	.066
$1,000 to $2,000	14,206.00	1,434.00	.101
$2,000 to $3,000	12,506.00	2,317.00	.185
$3,000 to $4,000	16,087.00	3,777.00	.235
$4,000 to $5,000	13,197.00	3,475.00	.263
$5,000 to $10,000	45,561.00	13,067.00	.287
$10,000 to $20,000	48,503.00	10,268.00	.292
$20,000 to $30,000	16,664.00	4,736.00	.284
$30,000 to $40,000	2,173.00	715.00	.329
$40,000 to $50,000	2,351.00	784.00	.333
Over $50,000	3,341.00	1,029.00	.308
Grand Total	$174,919.00	$41,620.00	.260

It will be observed from the above that the gross income group ranging in revenue from $1,000 to $2,000 was able to reduce the total tax charged by only approximately 10 per cent, which amount is represented by the property tax that was paid directly by persons in this group. But in the group receiving gross income from $40,000 to $50,000, the full offset of 33 1-3 per cent was taken. Now the question arises as to whether this difference in the application of the offset provision is sound policy within the group of taxpayers itself and regardless of the general effect of the offset on all property taxes. It is the opinion of the Tax Commission that such a practical effect as the one indicated by the above schedule is in violation of a sound policy and would be sufficient to argue for the repeal of the offset, even though this were the only consideration to take into effect. But this is not the sole consideration in this problem. Another one is of vital importance. The individuals who paid an income tax during the current year were able, by reason of the offset provision, to reduce the total amount of income tax which they paid by $41,620. This was of greatest bene-

fit to those individuals who were in the gross income tax group of from $40,000 to $50,000. It was of least benefit to those who were in the group which had the smallest average gross income, but there were at least a hundred thousand property owners in the state who were not fortunate enough to have an income which was taxable and who therefore received no benefit whatsoever from this offset of over $40,000. After all, the individuals who are paying a property tax and have no income of sufficient amount that an income is required, belong to the group of persons who find the property tax so heavy. It is such a group that should receive the benefit from the operation of an income tax, if we are to consider the principle of ability to pay. The offset, of course, is a distinct advantage to the individuals who are fortunate enough to have property and taxable income also. But this class of persons is comparatively small, and it is our opinion that it would be advisable to have an income tax in operation without any offset for property taxes, so that the benefits of the income tax in the state as a whole will be more widely distributed.

The operation of the property tax offset affects the corporation tax in a different degree. In this case the offset is more uniform in its operation. The total amount of offset which was allowed to corporations was $111,373. This is almost 31 per cent of the total amount of the tax charged, so that the offset of 33 1-3 per cent was almost reached in full. The effect of this offset on the corporation franchise tax under this statement of facts is simply this: In actual practice it reduces the rate of the income tax from 3 per cent to almost 2 per cent, and it also reduces the minimum tax proportionately, in case that a corporation does not have a taxable income. It is our opinion that it is far better that the Legislature determine whether or not a 3 per cent income tax on corporations is proper and so to specify in the law rather than to leave the actual rate to chance. We believe, therefore, that the offset provision in the corporation franchise tax should be abolished, so that corporations in fact will pay upon the rates indicated in the Corporation Franchise Tax Act instead upon such rates less about 31 per cent.

If the offset provisions in the above mentioned Acts had not been in operation during the calendar year 1932, there would have been available for a reduction in the property tax an additional $152,993, which under the present

arrangements was allowed as a deduction from the income tax. We believe that it is sound public policy to abolish the offset provision in both of these Acts, in order that a greater reduction can be given in all property taxes throughout the entire state.

THE FILING FEE

One of the unique features of the Income Tax is the provision for universal filing of returns regardless of the amount of income received and the requirement for the payment of a filing fee of one dollar with each return. This provision was the occasion for much comment and criticism during the first year of the operation of the Income Tax Law, but whether the dissatisfaction evidenced by any individual was caused by the exaction of the one dollar filing fee or by the necessity of his having to fill out a return, is difficult to determine.

Regarding the merits and objections to this feature of the law, the Tax Commission is not now prepared to express an opinion. The experience of one year is hardly sufficient to enable anyone to draw satisfactory conclusions and particularly when the year in question is one which cannot in any sense be described as normal or typical. It was to be expected that the introduction of a new and strange law to people who for a large part were unaccustomed either to making reports or keeping their personal accounts in the manner required by the Income Tax law would meet with considerable opposition and hostility. It is quite as reasonable to assume that as the people become accustomed to this requirement and have shaped their own affairs accordingly, much of this hostility will subside.

It is unfortunate, too, that the trial of this experiment should come in a year of extreme economic depression when the dollar filing fee, which a few years ago would have meant little or nothing to the majority, in 1932 assumed large proportions. With the return of a reasonable degree of prosperity, a large amount of the objection to the exaction of the fee should be removed.

Notwithstanding the difficulty of appraising the true value of universal filing and the filing fee, two provisions which are in reality separate but which are combined in common understanding, certain facts stand out. In the first place, the yield of the filing fee, irrespective of its effect

upon true income tax collections, was during 1932, in round figures, $120,000, which sum was paid into the State General Fund and consequently was available to defray the expenses of the general state administration including the administration of the Tax Commission.

As opposed to this revenue, it is certain that the requirement for a universal filing of Income Tax Returns, added considerably to the cost of operation of the Income Tax Department of the Tax Commission. As will appear from the tables attached, the total cost of the Income and Franchise Tax Department of the Tax Commission for the eighteen month period beginning July 1, 1931, when this department was created, and ending November 1, 1932, was $129,822. These costs include not only the cost of preparation of forms as well as the cost of current collection, filing and delinquency collections for one year, but also the equipment and capital charges for operation during future years. This total cost includes, also, the cost of administering the Corporation Franchise Tax and the Individual Income Tax as well as the administration of the law for universal filing and collection of the filing fee. Since all of this work has been done with one force working on all three phases of the laws at the same time, it has been impossible to keep separate accounts for the actual cost of each phase of the work. Some estimate, however, can be made and it can be safely said that the administration of an Income Tax law requiring only the filing of returns by individuals who received during the taxable year, a gross income equal to or in excess of their personal exemptions, ($1,000 in the case of a single person and $2,000 in the case of a married person) and the administration of the Franchise Tax in its present form would result in a saving in expense of not to exceed $25,000 per annum.

With this experience and based upon these estimates, it can safely be said that the filing fee produced a net revenue to the State during 1932 of about $90,000, which revenue more than paid the entire expenses of administering the Franchise and Income Taxes for a 12-month period and left the proceeds of these taxes clear for the reduction of the Property Tax for which they were intended.

In this analysis of the fiscal features of the universal filing and filing fee, the indirect advantages, which universal filing may afford to the Income Tax Law in the way of

insuring complete returns of income, have been disregarded. We have no means of measuring these advantages to which. by some political economists are attached much importance. Neither does this analysis attach any weight to the theory that the filing fee provision requiring as it does the payment of one dollar from substantially every able-bodied citizen of the State over twenty-one, creates a "tax conscience" and gives him an interest in Government which without the payment of any direct tax, he would not have.

On the other side of the picture, there is the difficulty of administration. The present law provides for the exemption from the payment of the filing fee (but not the filing of a return) of persons who are "infirm, idiotic, insane or indigent" and certain others. When applications for the exemption of thousands of individuals upon many of the grounds stated are thrown upon any commission or other body for determinating as to the right of exemption within a limited time, it is apparent that scant justice can be done. Either substantially all of the applicants will be granted the exemption, or comparatively few of them. The investigation required to ascertain the merits of each claim is such as to preclude its proper consideration.

During 1932, this was actually the situation presented to the Tax Commission. Every prospect indicates that 1933 will present no better situation in this respect, while a return to a reasonable degree of prosperity certainly should minimize the applications for remission of the filing fee upon the ground of indigence.

The Tax Commission strongly recommends that in the event the universal filing of Income Tax returns is retained, the filing fee should likewise be retained but that the provision for exemption from the payment of the filing fee should be limited, practically, to indigence, eliminating the provision for exemption of the "infirm" from the payment of the filing fee. This recommendation should require no elaborate explanation. If an individual's infirmity is such as to impair his ability to pay the filing fee, the exemption may be granted upon the ground of indigence. On the other hand, everyone knows someone within the circle of his own acquaintance who, while "infirm" is amply able to pay the filing fee and, in many cases, a substantial income tax.

In conclusion, the Tax Commission wishes to caution against the possibility of repealing the provision of the law relative to the payment of the filing fee while leaving the

provision requiring the universal filing of returns intact. Should this be done, the result would be the total loss of the revenue from the filing fee without any substantial reduction in the cost of operation, a situation which in the present condition of its finances the State could ill afford.

COST OF OPERATION

Tables are appended to this report showing the cost of the operation of the Income and Franchise Taxes during these first years of their operation. These figures do indicate a high cost of collection per dollar of yield, a cost so high as to cast some doubt upon the advisability of retaining these taxes, if it can be assumed to be typical of the normal yield. But this cost can by no means be considered typical. In the first place it should be recalled that it includes a large amount for equipment and preliminary expense, capital charges which cannot be assumed to be recurrent or to be repeated for a considerable period unless radical changes be made in the structure of the law. Secondly, it can be safely assumed that the cost of operation of a new law, with no precedent to follow, as to office routine, accounting, registration, filing, etc., or as to dealing with the public, will be higher the first years than later when practice has become more of a routine and methods more efficient. Thirdly, and most important, it must be recalled that the year 1931 was a year of extreme economic depression, that incomes were tremendously reduced in all branches of industry, and unemployment more prevalent than at any time in the current century with the exception of the year 1932. Moreover, since the law is extremely favorable to the taxpayer in allowing the taking of losses upon the sale of property determined by the difference between the amount received and the cost or value on January 1, 1931, whichever is the *higher*, and in allowing the exemption of dividends and earnings accrued before January 1, 1931, with the lapse of time, the losses in yield occasioned by these two items will be wiped out.

Another factor to be considered in analyzing the costs of operation is that they include the operation of the Franchise Tax which is a substitute for the old Corporation License Tax formerly collected by the Secretary of State. Consequently accurate comparison of costs with those of former years will require the determination of the costs of administering that tax, all of which has now been absorbed in the cost of administering the Franchise Tax. In

this connection, it is worthy of mention that the cost of making refunds to taxpayers on account of the overlapping of the last tax year under the Corporation License Tax and the first tax year under the Franchise Tax, has been a considerable item, the most of which has been cast upon the Tax Commission and are included in its costs as shown in the Tables. There have been during the year over 2100 claims for refunds on account of this duplication of tax presented, each of which has required or will required an audit by the Income and Franchise Tax Department, the preparation of claim forms and schedules, the issuance of warrants (through the auditor's and treasurer's offices) and the delivery of such warrants through the income and Franchise Tax Department. The cost of this extra work will be practically eliminated after 1932.

CONCLUSION

In conclusion we wish to summarize our recommendations as follows:

(1) That the administration of all special state taxes be placed in the hands of the Tax Commission. (pp. 5 to 9.)

(2) That the work of equalization of assessments commenced and carried on during the past two years be continued and that a sufficient appropriation be made for that purpose. (pp. 9 to 17.)

(3) That the Pumping Plant Exemption Act be repealed or that it be modified so as to exempt only such property as lies within the same taxing unit as the lands to which the pumped water is applied. (pp. 19 to 22.)

(4) That a limited sales tax on selected commodities not essential to public welfare be adopted for the purpose of supplying the funds required for the School Equalization fund. (pp. 33 to 36.)

(5) That provision be made for the prepayment of taxes with an inducement by way of a discount for prepayment. (pp. 27 to 30.)

(6) That the period of redemption for delinquent taxes for the years 1928 and 1929 be extended to 1935. (pp. 32-33.)

(7) That the rate of interest on delinquent taxes be temporarily reduced. (pp. 32-33.)

(8) That Sec. 6054 relating to compromise settlement of delinquent taxes be repealed. (pp. 24 to 27.)

(9) That the property tax offset in the Individual Income Tax Act and the Corporation Franchise Tax Act be abolished. (pp. 34 to 39.)

‡Car and Express Companies combined in 1927. In certain cases the total taxes charged do not correspond in both of the schedules based upon distribution according to source and according to purpose. This is due to the fact that the computations based on the source of the tax were made after some changes in valuation had become effective. (See notes on Beaver County.)
